Highway Crossing Signs

General Description

ASTS USA highway crossing signs supplement safety at crossing locations by giving motorists specific information about the that location. “STOP ON RED”, “RR CROSSING”, “2 TRACKS” and “3 TRACKS” signs meet all applicable industry standards and are available with Engineering Grade or High Intensity material for assured visibility in all ambient or illuminated lighting conditions. All types of signs are available for mounting on 4” or 5” (10.2 cm or 12.7 cm) masts. One version of the “STOP ON RED” sign incorporates a stand-off bracket.

Ordering Information

- Refer to ordering tabulation for signs and mounting hardware part numbers.
- Contact your ASTS USA Account Executive to order special signs and hardware not shown in the tabulation.
